

ALLEN ABRAHAM THOMAS

PYTHON FULL-STACK DEVELOPER

Thiruvalla | allenabraham194@gmail.com | +91 99471 15422

SUMMARY

Highly motivated B.Tech Computer Science and Engineering student with expertise in Python development and AI-driven solutions. Skilled in large-scale data processing, version control (Git), and databases. Key project experience includes leveraging machine learning models for data analysis and delivering actionable, data-driven insights. Possesses excellent technical, time management, and independent work skills, aligning with the requirements for a Python Developer role.

WORK EXPERIENCE

Python Fullstack Developer Trainee	Present
Quest Innovative Solutions	
Software Developer	September 2025-March 2026
Bytelock Digital Solution	
Flutter Development Intern	June 2024 - July 2024
Genzee Technologies Eranakulam, India	
Intern	May 2023 - May 2023
SRISHTI Robotics Eranakulam, India	

EDUCATION

B.Tech in Computer Science Engineering (AIML)	June 2021 - May 2025
St.Thomas College of Engineering and Technology Chengannur, Kerala	
+2 Board of Higher Secondary Education, Government of Kerala	2019 – 2022
St.Thomas Higher Secondary School, Kozhencherry	
10 Indian Certificate of Secondary Education (ICSE)	2018 - 2019
Bethany Academy, Vennikulam	

SKILLS

Languages	Python, C++, AI and ML Development, HTML5 & CSS, Django,JavaScript
Tools/Frameworks	Pandas, Numpy, Scikit-learn, TensorFlow + Keras, OpenCV, Regex, Docker, git, GitHub
Databases	MySQL, PostgreSQL
Other Skills	Time Management, Project Management, Leadership, Decision Making, Team Player, Fast Learner, Business understanding

CERTIFICATES

Data Analytics with Python (NPTEL Course)	Jan 2022 – April 2022
Web Development (Pantech ai)	July 2024 – Oct 2024
Machine Learning and Deep Learning - Fundamentals and Application (NPTEL Course)	June 2024 – Sep 2024

PROJECTS

Developer, Intermittent Human Monitoring System	Feb 2024 - June 2024
The Intermittent Human Activity Monitor enhances security by leveraging CNN and YOLOv5 for real-time video analysis to detect unauthorized movement. Unlike traditional sensor-based systems, it operates exclusively with cameras, delivering higher accuracy and minimizing false alarms. This AI-powered solution provides robust protection, secures critical areas, and ensures efficient safeguarding of assets.	
Developer, Automated Face Recognition Attendance System	Feb 2022 - Feb 2024
Developed a face recognition-based attendance system using the Histogram of Oriented Gradients (HOG) model. The system captures images or video via camera, detects and analyzes facial structures, and matches them against a database of registered individuals. Upon successful recognition, it logs attendance in real time, ensuring greater efficiency, accuracy, and security. Designed for applications in offices, schools, and secure facilities requiring reliable attendance management.	
Developer, Agro Link	March 2024 - March 2025
Agro Link is an AI-powered plant disease detection system developed using Python and the TensorFlow framework. I utilized a CNN MobileNet model for precise disease identification through image analysis. The project involved large-scale data aggregation and processing of plant images, where the system efficiently handles and analyzes real-time data to classify diseases and recommend suitable treatments. The system is integrated with a MySQL database for efficient data storage and management, demonstrating experience with structured data handling and ensuring smooth performance and easy accessibility for farmers to take timely preventive measures.
